

Productivity Option: The Autobag® Simple Count™ – Improves accuracy and enables automatic bag cycling

Productivity Options are often a cost-effective way to optimise overall packaging system performance. Automated Packaging Systems offers a variety of basic Productivity Options that are designed to increase packaging speeds, improve ergonomics, or efficiently tie-in to existing production lines.

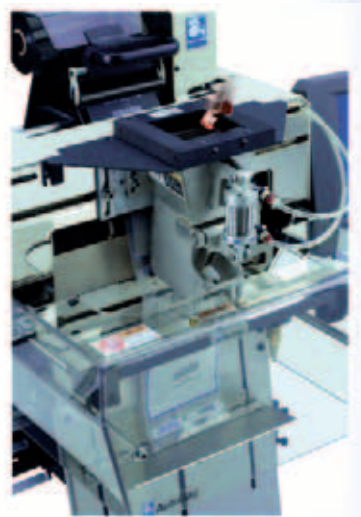

The Simple Count sensing eye increases productivity by automatically detecting and counting product and cycling the bagger when a pre-set count is reached.

The operator-friendly AutoTouch™ Control Screen enables fast and easy set-up of job parameters, and features job storage and recall for rapid changeovers. Real-time productivity data is displayed on screen while the parts are being counted, enabling visual verification of the current batch status and progress.

The Simple Count mounts directly to standard or accumulating funnels for optimum productivity.

User Benefits

- Automatic detection and counting of product as it passes through the sensing eye
- Automatically cycles bagger when a pre-set count is reached
- Integrates with standard or accumulating funnels for optimum productivity
- Sets up easily using the AutoTouch Control Screen
