

## Introducing the Autobag® 850S™ Mail Order Fulfillment System – The most technologically-advanced system for mail order fulfillment bagging.

The new Autobag® 850S™ bagger is uniquely designed to provide enhanced packaging productivity for mail order fulfillment applications. Capable of running bags up to 550mm wide, this system features a breakthrough bag opening technology that securely grips and holds the open bag in place. This creates a large, square opening (up to 275 x 275mm) that allows for easy loading of single or multi-line orders.

Next-bag-out printing is achieved with an advanced thermal transfer imprinter positioned directly over the next bag to be loaded. This ensures accuracy and efficiency in fulfillment applications that require frequent product and label changeovers, and prevents product queuing.

State-of-the-art engineering has resulted in a system that is inherently safe. The Autobag 850S eliminates the need for bulky guarding or devices required for safe operation. This unobstructed access makes loading ergonomic and improves operator throughput.

When used with genuine Autobag pre-opened bags, the Autobag 850S is the next evolution of high-quality, reliable and flexible mail order fulfillment packaging, backed by the industry's most comprehensive engineering and field service network.

### Markets Served

- Single or multi-line mail order fulfillment
- Prescription-by-mail fulfillment
- Apparel
- Fashion Accessories
- Sporting Goods
- Footwear

Next-bag-out printing prevents product queuing and reduces waste

Simple bag threading for easy changeover to keep production lines running smoothly

Programmable pass-through up to 275mm for maximum flexibility

Unobstructed access for easy loading of products
